

RAISING OCEAN TEMPERATURE

The temperature of the ocean is rising due to melting ice and thermal expansion.

RISING SEA LEVELS

The average sea levels are rising as a result of the melting ice and thermal expansion. This rising sea level could cause coastal flooding.

EFFECTS OF GLOBAL WARMING

ADÉLIE PENGUINS

The amount of space available to the Adélie penguin has got smaller leading to fewer penguins

MELTING POLAR ICE

As average temperatures increase polar ice is melting.
